TITLE: Data security technique for computer that uses screen saver for its
display device - involves counting frequency of reset of display device in
showing original image after display device is set to screen saver mode, from
which determination of untimely resetting of display device is based

TIX:
Data security technique for computer that uses screen saver for its display
device - involves counting frequency of reset of display device in showing
original image after display device is set to screen saver mode, from which
determination of untimely resetting of display device is based

ABTX:
The technique involves setting a display device (15) into screen saver mode
when no input is done on a keyboard (12) within a predetermined set-up time.
When an input signal from the keyboard is detected after the display device is
set to screen saver mode, the display device is reset to display the original
image.

ABTX:
ADVANTAGE - Determines if resetting of display device to screen saver mode is
against intent of user. Hides original image from persons other than user
since screen saver is used.
